

# SHAP

## Southampton Hand Assessment Procedure

The Southampton Hand Assessment Procedure (SHAP) is a clinically validated hand function test. Originally developed to assess the effectiveness of upper limb prostheses, the SHAP has now been applied to assessment of musculoskeletal and neurological conditions.

*The online SHAP test centre allows you to generate scores\**

*\*computer and monitor not included*

*The SHAP kit is housed within a heavy-duty metal case for ease of transport and storage*

*A timer is included to time the various SHAP tasks*

*14 activities of daily living (ADL) tasks*

*Light and heavy versions of the 6 abstract objects to enforce classical patterns of prehension*
